

# Leading the Way in Energy Efficiency

Schneider Electric offers energy efficiency solutions for residential, building, energy and infrastructure, and data centers and networks, which help you turn energy savings into growth!

Our four sustainability steps allow you to reach successful energy efficiency:

- Measure energy use to identify potential savings and areas of energy losses
- Install low-consumption equipment and systems
- Improve long-term use by deploying automation management, consulting, training and tracking resources while maintaining high performance
- Continuously analyze energy savings through maintenance, supervision and monitoring

Ambitious energy efficiency actions are feasible now; with existing installations, you can target up to 30% energy savings using our solutions and technologies.

Schneider Electric has made the commitment to be your energy manager, your energy expert and your **green partner!**
