

OFF - there's no greater energy savings

Occupancy and vacancy sensors

Lighting control panels

Daylighting controls

Wireless scene controls

Turning lights OFF is the most effective way to save energy. If you've installed efficient fluorescent lighting, but it's not controlled, there's still energy waste.

With controls from Watt Stopper, lights in empty spaces will turn off, lights in daylit spaces will remain off, and lights throughout your facility will operate to suit your schedule. You'll use less energy, meet energy codes, and save money.

And, you'll be happy with the return on investment. Let our technical experts and LEED-AP team help you achieve the energy savings and payback you're looking for. Please call 800.879.8585 or visit www.wattstopper.com.
